Digital Scholarship in the Tenure, Promotion, and Review Process Dec 07 2020 To receive tenure college and university professors have long been required to write scholarly monographs or articles, engage in serious research, and teach effectively. In recent years, however, the emergence of digital scholarship has revolutionized - and complicated - the picture in unexpected ways as new electronic media have enabled academics to communicate scholarly material in innovative formats such as websites, PowerPoint presentations, CD-ROMs, and virtual reality "tours." Despite this growing output of sophisticated digital scholarship, there has been little attempt to set standards, define basic issues and concepts, or integrate electronic scholarship into the tenure debate. This collection of cutting-edge articles marks the first effort to evaluate the place of digital scholarship in the tenure, promotion, and review process. As a primer aimed at scholars, faculty members, and department chairs in the humanities, social sciences, and other fields, as well as deans, provosts, and university administrators, this collection examines the evolution of nontraditional scholarship, analyzes the various formats, and suggests guidelines for

assessment on a scholarly level. It also examines the impact of digital scholarship in the classroom and academy and explores new directions for the future. This book will help shape policy in the murky world of tenure review and could become a central text for scholars and administrators everywhere.

A Step-by-Step Guide to Conducting an Integrative Review Oct 05 2020 This book provides guidance to readers for how to conduct an integrative review. Over the decades, with the expansion of evidence-based practice (EBP), the evolution of methods used in reviews has resulted in a wide spectrum of review types. Due to the overlapping characteristics of the various review methods, confusion exists related to terminology, descriptions and methods of each type. To fill this gap, this book examines components necessary to conduct a rigorous integrative

review from formulating questions through dissemination of the results of the review. Each chapter focuses on one component or step in this process and is written in a straightforward and readable manner. An integrative review is considered by many as an actual research study, hence it should be approached following established research methods involving well-defined steps. The integrative review is often compared with the systematic review. Both are used in healthcare research and follow a systematic process in reviewing literature and developing recommendations, but there are important differences that are addressed in the book. Evidence-based practice (EBP) demands high quality, rigorous evidence for nurse clinicians to make informed decisions with and for their patients. In nursing education, the integrative review is a frequent capstone project for graduate students and forms the basis for many doctoral projects. The Integrative review process should be valid, reliable and transparent and this book provides clear guidelines for writing an integrative review for students, educators, clinicians, and researchers. This book is a useful addition to courses for both undergraduate and graduate level writers of integrative reviews. In academia, a likely adoption would be in graduate research and research methods courses, and baccalaureate honor courses.
