This is the first comprehensive book on the European Hermes program. It tells the fascinating story of how Europe aimed for an independent manned spaceflight capability which was to complement US and Soviet/Russian space activities. In 1975, France decided to expand its plans for automated satellites for materials processing to include the development of a small 10 ton spaceplane to be launched on top of a future heavy-lifting Ariane rocket. This Hermes spaceplane would give Europe its own human spaceflight capability for shuttling crews between Earth and space stations. The European Space Agency backed the proposal. Unfortunately, after detailed studies, the project was cancelled in 1993. If Hermes had been introduced into service, it could have become the preferred "space taxi" for ferrying crews to and from the International Space Station. But that opportunity was lost. This book provides the first look of the complete story of and reasons for the demise of this ambitious program. It also gives an account which pieces of Hermes survived and are active in the 2nd decade of the 21st century. This fascinating story will be a great read for space enthusiasts. But it will also serve as a comprehensive documentation of an important episode in the history of manned spaceflight. I wrote a couple of poems on Scottish Independence then posted them in facebook. With the encouragement, comments and compliments received, this gave me the confidence to open a page dedicated to Independence and brought about: <https://www.facebook.com/PoemsforIndependence>. I have based these poems on truths, or to put it another way, what the media report so if they are lies, I can blame them. As most of my friends know, I had no vote in the referendum as I live in London, having moved from Glasgow in 1980. Scotland and its people deserve to be free as do the rest of the UK from Westminster's greed. These poems were written for the referendum and though that has come and gone, they are still very relevant today. The vote was NO but as I write, Labour, for all their lies, has almost diminished in Scotland whilst the SNP has grown at an alarming rate, almost 93,000 Members, and we have a new First Minister in Nicola Sturgeon after Alex Salmond stepped down. The Green Party and the SSP have also seen massive increases in their Memberships. From Alex Salmond: Dear Paul, I was very flattered to be the subject of one of your works! You are clearly as talented as you are prolific and it is obvious that Scottish Independence and the referendum have been a source of great inspiration for you. I hope you enjoy the poems in this book, Paul x Popular Mechanics inspires, instructs and influences readers to help them master the modern world. Whether it's practical DIY home-improvement tips, gadgets and digital technology, information on the newest cars or the latest breakthroughs in science -- PM is the ultimate guide to our high-tech lifestyle. In response to the recent financial crisis and the ensuing buildup in public indebtedness, an increasing number of advanced economies have created independent fiscal institutions (IFIs) to improve the quality of public finances and to strengthen the credibility of government policy. A review of Japan's fiscal policymaking over the past decades suggests that Japan would greatly benefit from establishing an IFI in line with internationally accepted standards of good practice. Such an institution could help correct critical weaknesses in policymaking and anchor expectations, especially if introduced as part of a fiscal framework with a medium-term perspective. This report identifies the critical points where undue influence can be exercised at different moments in the life of a regulator and discusses some of the avenues for developing a culture of independence, including through interactions with stakeholders, staffing and financing. Includes lists of orders, rules, bills etc. Let Γ be a

Borel class, or a Wadge class of Borel sets, and \aleph_ω be a cardinal. A Borel subset B of \mathbb{R}^d is potentially in Σ^1_1 if there is a finer Polish topology on \mathbb{R} such that B is in Σ^1_1 when \mathbb{R}^d is equipped with the new product topology. The author provides a way to recognize the sets potentially in Σ^1_1 and applies this to the classes of graphs (oriented or not), quasi-orders and partial orders.
