Maya is state of the art 3-D animation software, used extensively in the film industry for both complex computer graphics (particularly digital characters, elements like dinosaurs and tornados) and the generation of storyboards for complex motion sequences. Maya was the key tool used not only in creating the creatures of The Lord of the Rings and Stuart Little, but is also heavily used in television to create 3D graphics for advertising and promo spots. Video games also use Maya extensively to create convincingly violent motion in 3D animations. Maya is leading software tool in this space. The Maya 4.5 Bible allows even a novice animator to build up skills – from basic polygon assembling to sophisticated characters and fluid dynamics – by doing, rather than just reading. 16 in-depth workshop put readers through the paces of creating professional-level Maya animations, illustrating all the major techniques taught in the text. Computer graphics animation is one of the fastest growing career fields in Hollywood – the Maya 4.5 Bible gives aspiring animators the hands-on skills they need to break into the market. The Code of federal regulations is the codification of the general and permanent rules published in the Federal register by the executive departments and agencies of the federal government. This book seeks to overcome the tension between 'western' and 'non-western' categories and tools in the study of global history, showing how most western approaches to the social sciences and history have developed through transnational and colonial interactions. Offering a transnational and global history of the main tools we have to understand the word and its transformations over the last three centuries, Tensions of Social History

explores the construction of archives and historical memory, the making of statistics and their use in politics, the identification of social actors, and the emergence of key social theories. Providing key insights into how to write history and develop social sciences in the global era while avoiding eurocentrism and cultural exceptionalism, this ambitious book shows how global history is made of encounters rather than confrontations between civilizations. In the Moroccan French Protectorate (1912-1956), the French established vocational and fine art schools, imposed modern systems of industrial production and pedagogy and reinvented old traditions. Hamid Irbouh argues that the French used this systematic modernisation of local arts and crafts regulation to impose their control. He looks in particular at the role and place of women in the structures of art production and education created by the French- that transformed and dominated Moroccan society during the colonial period. French women infiltrated the Moroccan milieu, to buttress colonial ideology, yet at critical moments, Moroccan women rejected traditional roles and sabotaged colonial plans. Meanwhile, the contradictions between reformist goals and the old order added to social dislocations and led to rebellion against French hegemony. Irbouh examines and analyses these processes and demonstrates how Moroccan artists have struggled to exorcise French influences and rediscover an authentic visual culture since decolonisation. This book reveals that the weight of colonial history continues to weigh heavily on artistic practice and production.
