Design Manual for High Temperature Hot Water and Steam Systems Sep 24 2022 A technical engineering manual presenting a hands-on approach for solving problems related to the design and analysis of both high temperature hot water and steam energy systems. This convenient single-volume source demonstrates practical, time-saving calculations for sizing and selecting energy system requirements, including types of fuel, storage, handling facilities, waste disposal needs, HVAC needs, and back-up systems. Also discusses

calculations for sizing compressors, air pollution equipment, fans, filters and related components. Takes into account considerations for fuel corrosion, and chemical variation in the water and air.
