The Amine Oxidase Workshop was the brain child of Brian Callingham and Keith Tipton. The present book is the proceedings of the fourth in

the series and in the past we have dedicated our meeting to individuals who have made significant fundamental contributions to the biochemistry, physiology and pharmacology of this interesting group of enzymes. The present meeting is not an exception because we have gathered here in Wtirzburg to honour an individual whose outstanding work on the autonomic pharmacology has span ned more than 30 years and whose contribution has made a vast impact in our understanding of the kinetic relationship between amine metabolism (that uptake and enzymatic inactivation) and adrenergic neurotransmission. We speak of course of Professor Ullrich Trendelenburg, or Ulli as he likes to be known. Like the amine oxidases, he has a unique place in Pharmacology. Professor Trendelenburg was born on the eve of the new year of 1922 in the city of Rostock in northern Germany, where his father was Professor of Pharmacology at the Faculty of Medicine of Rostock. His father accepted the offer to take over the corresponding chair in Freiburg im Breisgrau (in Southern Germany). As the youngest of four children, Ulli grew up mainly in the garden of the department, in the animal quarters and in the workshop. Of the various coworkers of his father, one he liked especially was Otto Kraye, the young pharmacologist. This book documents the dramatic changes in the field of electronic media in the past decade and provides informed insights in the exciting, and changes yet to come. It examines the transition in broadcasting from analog to digital transmission and the changing business models of electronic media. "Despite the 1989 global ivory trade ban, poaching and ivory smuggling have not abated. More than half of Tanzania's elephants have been killed for their ivory since 2007. A similarly alarming story can be told of the herds in northern Mozambique and across swathes of central Africa. But why the new upsurge? The popular narrative blames a meeting of two evils -

- criminal poaching and terrorism. But the answer is not that simple. Since ancient times, large-scale killing of elephants for their tusks has been driven by demand beyond Africa's range states from the Egyptian pharaohs through the industrialising West to the new wealthy business class of China. Elephant hunting in Africa is also governed by human-elephant conflict, traditional hunting practices and the impact of colonial exploitation and criminalisation. Ivory follows this complex history of the tusk trade in Africa, and explains why it is corruption, crime and politics, rather than insurgency, that we should worry about. In this ground-breaking work, Somerville argues that regulation -- not prohibition -- of the ivory trade is the best way to stop uncontrolled poaching."--Publisher's description. In 2009, a bipartisan Knight Commission found that while the broadband age is enabling an info. and commun. renaissance, local communities in particular are being unevenly served with critical info. about local issues. Soon after the Knight Commission delivered its findings, the FCC initiated a working group to identify crosscurrent and trend, and make recommendations on how the info. needs of communities can be met in a broadband world. This report by the FCC Working Group on the Info. Needs of Communities addresses the rapidly changing media landscape in a broadband age. Contents: Media Landscape; The Policy and Regulatory Landscape; Recommendations. Charts and tables. This is a print on demand report. This collection, edited by Kamran Afary and Alice Marianne Fritz and authored by contributors with experience as educators, artists, and licensed therapists, integrates communication, therapy, and pedagogy to explore the role and efficacy of expressive arts therapies. In the last 25 years, a major shift has occurred in the field of violence prevention, from the assumption that violence is inevitable to the realization that violence is preventable. As we learn more about what works to reduce violence, the challenge facing those who work in the field is how to use all of this new information to rapidly deploy or enhance new programs. At the same time, new communications technologies and distribution channels have altered traditional means of

communications, and have made community-based efforts to prevent violence possible by making information readily available. How can these new technologies be successfully applied to the field of violence prevention? On December 8-9, 2011, the IOM's Forum on Global Violence Prevention held a workshop to explore the intersection of violence prevention and information and communications technology. The workshop - called "mPreventViolence" - provided an opportunity for practitioners to engage in new and innovative thinking concerning these two fields with the goal of bridging gaps in language, processes, and mechanisms. The workshop focused on exploring the potential applications of technology to violence prevention, drawing on experience in development, health, and the social sector as well as from industry and the private sector. Communication and Technology for Violence Prevention: Workshop Summary is the report that fully explains this workshop. Popular Mechanics inspires, instructs and influences readers to help them master the modern world. APPENDIX A: Chronology of the Exploration of Subsurface Life -- APPENDIX B: Chronology of the Meeting of the U.S. DOE's SSP Meetings -- NOTES -- REFERENCES -- INDEX From Archibald MacLeish to David Sedaris, radio storytelling has long borrowed from the world of literature, yet the narrative radio work of well-known writers and others is a story that has not been told before. And when the literary aspects of specific programs such as The War of the Worlds or Sorry, Wrong Number were considered, scrutiny was superficial. In Lost Sound, Jeff Porter examines the vital interplay between acoustic techniques and modernist practices in the growth of radio. Concentrating on the 1930s through the 1970s, but also speaking to the rising popularity of today's narrative broadcasts such as This American Life, Radiolab, Serial, and The Organist, Porter's close readings of key radio programs show how writers adapted literary techniques to an acoustic medium with great effect. Addressing avant-garde sound poetry and

experimental literature on the air, alongside industry policy and network economics, Porter identifies the ways radio challenged the conventional distinctions between highbrow and lowbrow cultural content to produce a dynamic popular culture. Winner of the 2022 Broadcast Education Association Book Award One of the first books to examine the status of broadcasting on its one hundredth anniversary, *Radio's Second Century* investigates both vanguard and perennial topics relevant to radio's past, present, and future. As the radio industry enters its second century of existence, it continues to be a dominant mass medium with almost total listenership saturation despite rapid technological advancements that provide alternatives for consumers. Lasting influences such as on-air personalities, audience behavior, fan relationships, and localism are analyzed as well as contemporary issues including social and digital media. Other essays examine the regulatory concerns that continue to exist for public radio, commercial radio, and community radio, and discuss the hindrances and challenges posed by government regulation with an emphasis on both American and international perspectives. Radio's impact on cultural hegemony through creative programming content in the areas of religion, ethnic inclusivity, and gender parity is also explored. Taken together, this volume compromises a meaningful insight into the broadcast industry's continuing power to inform and entertain listeners around the world via its oldest mass medium--radio. In *Network Nations*, Michele Hilmes reveals and re-conceptualizes the roots of media globalization through a historical look at the productive transnational cultural relationship between British and American broadcasting. Though frequently painted as opposites--the British public service tradition contrasting with the American commercial system--in fact they represent two sides of the same coin. Neither could have developed without the constant presence of the other, in terms not only of industry and policy but of aesthetics, culture, and creativity, despite a long history of oppositional rhetoric. Based on primary research in British and American archives, *Network Nations* argues for a new transnational approach to media history, looking

across the traditional national boundaries within which media is studied to encourage an awareness that media globalization has a long and fruitful history. Placing media history in the framework of theories of nationalism and national identity, Hilmes examines critical episodes of transnational interaction between the US and Britain, from radio's amateurs to the relationship between early network heads; from the development of radio features and drama to television spy shows and miniseries; as each other's largest suppliers of programming and as competitors on the world stage; and as a network of creative, business, and personal relationships that has rarely been examined, but that shapes television around the world. As the global circuits of television grow and as global regions, particularly Europe, attempt to define a common culture, the historical role played by the British/US media dialogue takes on new significance. Metallic (magnetic and non-magnetic) nanocrystalline materials have been known for over ten years but only recent developments in the research into those complex alloys and their metastable amorphous precursors have created a need to summarize the most important accomplishments in the field. This book is a collection of articles on various aspects of metallic nanocrystalline materials, and an attempt to address this above need. The main focus of the papers is put on the new issues that emerge in the studies of nanocrystalline materials, and, in particular, on (i) new compositions of the alloys, (ii) properties of conventional nanocrystalline materials, (iii) modeling and simulations, (iv) preparation methods, (v) experimental techniques of measurements, and (vi) different modern applications. Interesting phenomena of the physics of nanocrystalline materials are a consequence of the effects induced by the nanocrystalline structure. They include interface physics, the influence of the grain boundaries, the averaging of magnetic anisotropy by exchange interactions, the decrease in exchange length, and the existence of a minimum two-phase structure at the atomic scale. Attention is also paid to the special character of the local atomic ordering and to the corresponding interatomic bonding as well as to anomalies and particularities of electron density distributions,

and to the formation of metastable, nanocrystalline (or quasi-crystalline) phases built from exceptionally small grains with special properties. Another important focus of attention are new classes of materials which are not based on new compositions, but rather on the original and special crystalline structure in the nanoscale. Marc Holzer and Richard Schweser have written a fresh and highly engaging textbook for the introductory course in Public Administration. Their coverage is both comprehensive and cutting edge, not just including all the basic topics (OT, budgeting, HRM), but also reflecting new realities in public administration: Innovations in e-government The importance of new technology Changes in intergovernmental relations, especially the emphasis on inter-local and shared regional resources Public performance and accountability initiatives Public Administration has been crafted with student appeal in mind. Each of the book's 14 chapters is generously and colorfully illustrated with cartoons, quotes, and artwork—all reinforcing the book's theme that the field of PA is rooted in the cultural and political world. Each chapter is also supported with a listing of key terms, exercises, and additional resources. A comprehensive manual for pre- and in-service ESL, EFL, and EIL educators who work with multilingual students at the secondary and postsecondary levels, this text balances insights from reading theory and research with highly practical, field-tested strategies for teaching and assessing second-language reading that educators can readily adopt and adapt to suit their contexts and student populations. Teaching Readers of English is a complete "go-to" source for teaching reading and promoting classroom and professional literacies in an increasingly digital world. Offering principled approaches and methods for planning and delivering effective L2 reading instruction, the text includes pedagogical features, such as questions for reflection, further reading and resources, and application activities to develop purposeful classroom reading lessons in a range of contexts. Changes in the Second Edition: Updated and revised chapters on formative and summative reading assessment, developing vocabulary knowledge and grammatical skill, and cultivating

extensive reading and literary appreciation Updated information on institutional settings and reader demographics New pedagogical features in each chapter, including Chapter Summaries, Further Reading, Reflection and Review, and Application Activities A streamlined chapter sequence to enhance the text's usability This set of documents is part of a comprehensive study of the Petroleum Reserve area in northwestern Alaska. It summarizes a complete series of studies and reports on land use options for the area; that series was published as: Study report (National Petroleum Reserve in Alaska Task Force (U.S.)).
