Precautionary Labels for Chemical Containers Feb 22 2020 This book focuses on chemical labels-the regulations behind them, the content and format, and how they are used. It looks at labels with relation to worker protection, because the chemical label is the single most important protective item workers will encounter in their day-to-day handling of chemicals. The book addresses chemical labels for non-bulk containers such as totes, drums, bottles, and boxes. The U.S. and Canadian regulations related to chemical containers present a framework for understanding the content of labels. This framework is then used to review protection against

Failure-to-Warn litigation. Easily understandable methods are presented for teaching workers to use labels using proven procedures for minimizing the possibility of "putting the wrong stuff in the wrong pot." A complete description of the new American National Standards Institute MSDS format is provided. Reproductions of actual labels illustrate ideas, and detailed information is tabulated for ease of understanding.

Safety and Health Handbook for Cytotoxic Drugs Jan 15 2022 Many Healthcare workers must deal on a daily basis with the transportation, preparation, storage, clean up, and disposal of cytotoxic drugs, which are used in chemotherapy because of their harmful effect on cancer cells. These drugs also have harmful effects on good cells, and they therefore pose a significant health risk to those who work with them. Yet there is little safety and health information available about them, and what information is available is scattered across a vast array of literature. The Safety and Health Handbook for Cytotoxic Drugs collects this information so that healthcare workers can better understand the drugs they work with and the safety and health procedures that should be followed. In it, author Samuel J. Murff presents comprehensive technical and procedural information on 106 of the most common cytotoxic drugs. The book provides guidance on quickly dealing with spills, reducing unnecessary exposure, and complying with pertinent regulations and standards in order to better equip healthcare workers to maintain a safe work environment.
